

.bashrc

My favourite for BASH.

```
vi ~/.bashrc
```

```
PS1="[\t \d] @\h \w\\$ \[$(tput sgr0)\]"
```

A terminal window screenshot showing a sequence of commands and their outputs. The prompt is a custom PS1 string. The commands are: `@ge`, `@ge`, `@ge`, and `@ge`. The outputs are: `#`, `#`, `#`, and `#`. The last command is followed by a `sudo` prompt: `[0] 0:sudo- 1:sudo*`. The terminal has a light blue background and a green cursor line.

```
[20:04:52 Wed Sep 30] @ge #  
[20:05:13 Wed Sep 30] @ge #  
[20:07:32 Wed Sep 30] @ge #  
[20:07:32 Wed Sep 30] @ge #  
[0] 0:sudo- 1:sudo*
```

to enable in current terminal

```
. ~/.bashrc
```
